

SekexBot for Windows — Release Notes & Install Guide

Version 1.54.3 · September 30, 2026 · Runs on your Windows 10 / 11 PC

SekexBot trades your Alpaca account automatically, and lets you trade by hand, from one desktop app on your PC. It is the same bot as the Android edition, with the same dashboard, in its own window, plus a tray icon by the clock. It's portable, so everything stays in one folder, even on a USB drive. It restarts itself if it stops, keeps the PC awake while it trades, and updates from inside the app.

What's new in 1.54.3

Change	
Close after hours (1.54.3)	Close on a position in pre-market, after-hours or overnight now keeps working until it's sold: the limit order is priced through the quote and re-priced a little deeper every 15 seconds (0.3% up to 1.5%), and you're told when the position is closed. Pressing Close again goes a step deeper.
One copy at a time (1.54.2)	Starting a second SekexBot copy (for example a newer zip extracted to another folder) while one runs no longer causes endless restarts and 'stopped unexpectedly' notifications: it tells you where the running copy is and closes. To switch copies, Quit the running one from its tray icon first. Updates now report this case clearly.
Fix (1.54.1)	The 1.54.0 Windows zip was missing part of the Alpaca library, so the dashboard showed No module named 'alpaca.data' and couldn't connect. Fixed, and the build now checks that every library file is in the zip. If you installed 1.54.0: extract this zip over your SekexBot folder (choose Replace) - your keys and settings are kept.
Windows edition	First release of SekexBot as a Windows desktop app. SekexBot.exe starts it. The dashboard opens in its own app window (Microsoft Edge app mode: no tabs or address bar), and a tray icon shows the state: green = auto-trader on, grey = off, red = halted, amber = starting.
Portable	Nothing is installed into Windows. The first start downloads the official portable Python 3.12 from python.org (about 11 MB), checks it's signed by the Python Software Foundation, and uses the libraries that ship in the zip. It works offline if you put the Python zip next to SekexBot.exe.
Always on	A watchdog restarts the bot if it stops, and shows a notification. Keep PC awake stops Windows from sleeping while SekexBot runs. Start with Windows starts it in the tray when you sign in, and the auto-trader resumes if it was running.
Alerts	Windows notifications with Trade and Close buttons. Close always asks you first. BUY / SELL alerts are spoken with the Windows voice, even with the window closed.
Updates	⚙️ → Update installs SekexBot_Windows_vX.Y.Z.zip (or from an update link to latest-windows.json) and keeps your keys, settings, learning memory and journal. The last 3 versions are kept for one-click rollback.

Change	
sekex command	sekex status, start, stop, log, doctor, update, rollback, backup, close, autostart, and more, from the SekexBot folder.
Fixed for Windows	Time labels like '9:31 AM' in the shortlist, pre-market timeline, evening review and movers no longer crash on Windows. The header buttons no longer overlap the sound / bell / gear icons on wide screens.
Trading (1.54.0)	Fixes for the benched setups: trades closed before this version no longer count when a setup is judged; a benched setup's daily probe trade is quarter-size. MICRO_SCALP risk capped at about 0.6 ATR. FLUSH_SHORT needs two closes under the broken range low, no chasing, and 1.5x volume. FLUSH_BOUNCE needs a higher low and a close over the EMA9 and the prior high. Includes everything from 1.53.0 (profit lock, earlier partials, reversal exit).

What you need

Item	Details
PC	Windows 10 or 11, 64-bit, about 400 MB free, internet, and Microsoft Edge (built into Windows). A desktop, or a laptop kept plugged in with the lid open.
Alpaca keys	Paper Key ID and Secret (start with PK). Live keys and a Claude API key are optional.
Files	SekexBot_Windows_v1.54.3.zip for a new install and for updating. Optional: fill in the sekexbot-setup.conf.example that's inside it.

New install (about 2 minutes)

- 1 Download **SekexBot_Windows_v1.54.3.zip**.
- 2 **Right-click the zip → Properties → tick Unblock → OK.** This stops Windows from asking about every file.
- 3 Right-click the zip → **Extract All...** and choose where SekexBot lives, for example **C:\SekexBot**, Documents, or a USB drive.
- 4 Optional, for zero typing: in the extracted folder, rename **sekexbot-setup.conf.example** to **sekexbot-setup.conf** and fill in your paper keys, daily limit, START_TRADING=yes, and so on. It's deleted after setup, because it holds your keys.
- 5 Double-click **SekexBot.exe**. If Windows says "Windows protected your PC", click **More info → Run anyway** (the app isn't code-signed).
- 6 A setup window gets the portable Python, connects the libraries, applies your settings file, adds SekexBot to the Start menu and Desktop, turns on Start with Windows, and opens the dashboard.

Bring over what another SekexBot learned (optional): before step 5, make a folder named **SekexBot_data** next to SekexBot.exe (or in Downloads), and copy the other copy's **data** folder and **.env** file into it. Setup imports them if this copy has none. Delete the folder afterwards.

No internet on this PC? Download **python-3.12.10-embed-amd64.zip** from python.org on another computer and put it next to SekexBot.exe before step 5.

First start

- 1 The dashboard opens in its own window at <http://127.0.0.1:8010>. The tray icon appears by the clock. On Windows 11 it may be under the ^ arrow; drag it onto the taskbar to keep it visible.
- 2 If you didn't use the settings file: click ⚙ → **Broker keys**, paste your Paper keys, then **Test connection** and **Save & connect**.
- 3 On the **Auto** tab, set your **Daily max loss** and turn on the **Auto-trader** switch.
- 4 Closing the window keeps SekexBot running. Double-click the tray icon, or the Desktop / Start menu icon, to bring it back.

Keep Windows from stopping SekexBot (do once)

Setting	What to do
Keep PC awake	On by default (tray icon → right-click → Keep PC awake). Blocks sleep while SekexBot runs.
Sleep	Settings → System → Power → Screen and sleep → When plugged in, put my device to sleep after: Never (safest).
Laptop lid	Control Panel → Power Options → Choose what closing the lid does → Plugged in: Do nothing . Keep it plugged in.
Windows Update	Settings → Windows Update → Advanced options → Active hours : cover your trading hours. With Start with Windows on, SekexBot comes back after a restart.
Notifications	Settings → System → Notifications: make sure notifications, and SekexBot , are on, and that Do not disturb / Focus is off during trading.

The setup check (sekex doctor) shows what's missing.

Updating

How	Steps
In the app	⚙ → Update . Pick the new SekexBot_Windows_vX.Y.Z.zip (no need to unzip it) and click Install. Or paste your update link once, for example .../sekexbot-updates/main/latest-windows.json , and click Install when a new version is announced.
Command line	<code>sekex update C:\Users\you\Downloads\SekexBot_Windows_v1.54.3.zip</code>
Publishing	<code>sekex publish SekexBot_Windows_vX.Y.Z.zip</code> uploads the zip to your GitHub update repo and writes latest-windows.json next to the Android edition's latest.json.

An update takes about a minute. It keeps your keys, settings, learning memory, journal and the portable Python. The version it replaces is saved (the last 3 are kept: ⚙ → **Update** → **Revert**, or `sekex rollback`). Trading resumes by itself. During regular hours, positions keep their stop-loss at Alpaca in the meantime.

Using the app

Area	What it does
Tray icon	Hover: mode, state, day P&L. Double-click: open the dashboard. Right-click: Start / Stop auto-trader, Keep PC awake, Start with Windows, Open in web browser, Show log, Open SekexBot folder, Restart, Quit.
⚙ Layout	Tabs: Auto · Manual · Positions · More. Auto Manual: one big switch under the header. One page: everything on one page (the default on a PC).
⚙ Theme	Dark, Light, or System (follows Windows).
Auto	Auto-trader on/off, daily loss limit, sessions (regular, pre-market, after-hours, overnight), stock picker, bot positions, activity, what the bot learned.
Manual ticket	Buy / Sell (Short); Market, Limit, Stop, Stop limit, Trailing stop; quantity in shares or \$; Time in force; session; optional stop-loss / take-profit.
Chart	Hover or drag for a crosshair (time, OHLC, volume, trend, VWAP); click to pin a point and measure the move; scroll to zoom, double-click to reset; 1m / 3m / 5m / 15m.
Double-click	Double-click any stock in the picker, chips or positions: a quick sheet with the suggested size and BUY / SELL buttons.
Alerts	Bell icon: the history. ⚙ → Alerts: Windows notifications, beep, voice, quiet hours, ntfy / Telegram, price alerts.
Voice	Voice commands work in the SekexBot window: allow the microphone when asked. Every command needs a CONFIRM click.
Help	⚙ → Help & repair: Run checks, one-click fixes, Ask AI, Send report (saved to Downloads).
Positions	Every position marked YOU or BOT, with Close, Close ½ and Cancel for orders; journal and daily results with totals.
Extended hours and 24 Hour Market take limit orders only. Extended-hours stops are watched by SekexBot itself, not Alpaca, so keep the PC on while it holds one. The bot never trades or flattens your manual positions; the daily-loss halt still closes everything in the account.	

The sekex command (optional)

Open a Command Prompt in the SekexBot folder (type **cmd** in the folder's address bar and press Enter), then:

Command	What it does
sekex start	Start SekexBot (tray + auto-restart + keep awake)
sekex stop	Stop the auto-trader, then the app
sekex status	Mode, state, today's P&L (green/red), PC checks
sekex doctor	Check the PC setup
sekex update <zip>	Install a newer version, keeping your data
sekex rollback [X.Y.Z]	Go back to a saved version
sekex backup	Zip keys, learning memory and journal to Downloads (keep it private)
sekex log	Live log (Ctrl+C to quit)
sekex close SYMBOL	Close a whole position
sekex autostart on off	Start with Windows
sekex setup	Repair the portable Python, libraries and shortcuts

Troubleshooting

Problem	Fix
"Windows protected your PC"	More info → Run anyway. Next time, unblock the zip (Properties → Unblock) before extracting.
Setup can't download Python	Check the internet and start SekexBot.exe again. Offline: put python-3.12.10-embed-amd64.zip next to SekexBot.exe.
Nothing opens	Look for the tray icon by the clock, or run sekex status. Details: data\watchdog.log.
Port 8010 busy	Another program uses it: close it, or add PORT=8011 to .env.
Stopped overnight	The PC slept or restarted. Recheck "Keep Windows from stopping SekexBot" above.
No notifications	Settings → System → Notifications: SekexBot on, Do not disturb off. Then ⚙ → Alerts → Send test alert.
Update seems stuck	Wait two minutes, then start SekexBot.exe. The log is .run\update.log.
An order error	Click Help next to it for a plain-language explanation.
Anything else	⚙ → Help & repair → Run checks. Or send sekex doctor and sekex log.

Release history (all editions)

Version	Highlights
1.54.3	Close works in after-hours and overnight
1.54.2	Windows edition
1.54.1	Windows edition fix
1.54.0	Windows edition; Portable; Fixed for Windows
1.53.0	Profit protection, the bot now banks gains properly.; Profit lock; Earlier partials; Reversal exit
1.52.1	Voice commands understand you better
1.52.0	Shorts from 7 AM for every setup; Every setup can now short
1.51.1	Two fixes from a code review
1.51.0	Voice + header patch built in; Header message
1.50.1	Header message moved into Settings → Header message
1.50.0	Review my signals with Claude
1.49.1	Your own message in the header
1.49.0	Fix with Claude
1.48.1	Fixed
1.48.0	☐ Close later
1.47.2	More close fixes
1.47.1	Fixed
1.47.0	Beep and voice alerts for BUY / SELL on your watchlist, with an ON / OFF speaker button in the top bar; New Settings...
1.46.0	Early BUY? / SELL? warnings on the chart, for every watchlist stock; Display only
1.45.0	Two safety rails
1.44.0	Let winners run and pick better; Entry filters
1.43.0	Self-fix
1.42.0	Double-tap any row
1.41.3	Anti-churn block is now only 2 losing closes on the same stock within 30 minutes
1.41.2	Stop churning one stock
1.41.1	Pre/after-market trades no longer stop out too early
1.41.0	Automatic system now finds and trades BOTH longs and shorts

Version	Highlights
1.40.1	Fixed pre-market orders being rejected for insufficient buying power
1.40.0	Auto re-entry that jumps back in; Switch
1.39.0	Automatic short system; Overnight homework
1.38.0	Pre-market timeline; Short at open
1.37.0	Three new tools, all off by default except the review; New command; Fixed
1.36.0	Automatic direction trading
1.35.0	Early direction call
1.34.0	Catch the morning trend and learn overnight
1.33.0	Trading levels
1.32.0	Automatic morning and night setup
1.31.0	Auto-harvest; Reopen last close
1.30.1	Publish in one command
1.30.0	Pre-open mode; Gap fade; Evening movers; Big movers list
1.29.0	Shorts on by default; Trade every flip
1.28.0	One-tap manual trading
1.27.0	Cooling off is now optional
1.26.0	Quick harvest for scalps
1.25.0	Aggressive scalping
1.24.0	Profit harvesting in every session
1.23.0	Opening Drive setup
1.22.0	Trend research
1.21.0	Trading stats
1.20.5	Charts at any hour
1.20.4	Take profit after a halt
1.20.3	Daily loss limit
1.20.2	Auto-trade safety fixes
1.20.1	Fixes
1.20.0	Paper / Live switch; Account bar

Safety: run on paper for several weeks before going live. The simulator checks mechanics, not profitability. Use a dedicated Alpaca account. Gaps and slippage can push a loss past your limit. Your keys live in the SekexBot folder, so use a Windows password and don't share the folder. This isn't financial advice: automated trading can lose money.
